DETAILED ACTION***Drawings***

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "32" has been used to designate both "compression chamber" (see page 3, line 1) and "discharge port" (see page 3, line 5). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by any one of Dennedy (Patent Number 1,555,192) or Ito et al. (Ito) (Publication Number JP 2003-232287).

Regarding claims 1, 4 and 5, Dennedy (as shown in Fig. 1) or Ito (as shown in Fig. 1) discloses a compressor pump unit for receiving a fluid to be compressed, and compressing the fluid, the compressor unit at least two compression chambers (not numbered; however, clearly seen in Fig. 1 in Dennedy and in Ito), with the two compression chambers delivering a compressed refrigerant into a single discharge chamber (11 in Dennedy; 6 in Ito) defined in a discharge housing; and at least one baffle plate (27, 28 in Dennedy; 18 in Ito) within the discharge chamber and located between the two compression chambers; the discharge chamber (11 in Dennedy; 6 in Ito) being reduced in cross-sectional area from an upstream end adjacent the compression chambers to a downstream end; the compression chambers delivering a compressed fluid through discharge ports (25 in Dennedy; 16 in Ito) in a discharge plate, and into the single discharge chamber, with the discharge ports (25 in Dennedy; 16 in Ito) being located on opposed sides of the baffle plate (27, 28 in Dennedy; 18 in Ito).

Allowable Subject Matter

3. Claims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. Claims 6 and 7 are allowed.
